MISSION

My mission is to create powerful web applications and memorable experiences.

EDUCATION

Lawrence Technological University - May 2013

Bachelors of Computer Science with a concentration in **business applications**.

Minoring in **Business Management**.

HIGHLIGHTED WORK EXPERIENCE

July 2012 to September 2012 - **HubSpot Inc.**

DevOps Intern

HubSpot provides inbound marketing software that helps companies get found and make a solid presence on the web. I interned at HubSpot in **DevOps** to manage **over 1,000 EC2 instances**.

- Corrected issue that periodically locked up our **Hadoop Cluster**.
- **Lowered production costs** by removing previously untraceable EC2 instances.
- **Recovered corrupted production MySQL database**.

April 2012 to July 2012 - **Mango Languages Inc.**

Project Manager

Mango Languages specializes in language learning software for consumers and libraries. Mango Languages contacted me to create a **Google Hangout application** called **Mango Skits**; a multiplayer game to be presented at **Google IO**.

- Deployed from initial concept to production **1 month before deadline**.
- Built on **Heroku** and **Twitter Bootstrap** using **Ruby on Rails 3.2**.
- Collaborated with **Google** to harness their immature API.

June 2011 to October 2011 - **SpeedySeat Inc.**

Web Developer

SpeedySeat was a **bootstrapped startup** created to develop a front house restaurant reservation and seating software. Using Amazon's **cloud computing platform**, SpeedySeat was developed for **rapid deployment**, **load balanced reliability** and **efficient use of resources**.

- Deployed to **EC2** via **Chef** with an **S3** backend for a **shared-nothing-architecture**.
- Built with **Node.js** using **Jade/Compass/SCSS + jQueryMobile**.
- Optimized to automatically adjust for mobile platforms via **CSS Media Queries**.
