MISSION

My mission is to create exciting web applications and deliver world-class quality in design through experience.

EDUCATION

Lawrence Technological University – Graduation Spring 2013

Bachelors of **Computer Science** with a concentration in business applications.
Minoring in **Business Management**.

HIGHLIGHTED WORK EXPERIENCE

July 2012 to September 2012 – **HubSpot Inc.**
Intern

HubSpot provides inbound marketing software that helps companies get found and make a solid presence on the web. I interned at HubSpot in **DevOps** to help manage **over 1,000 EC2 instances**.

- Removed unused and **previously untraceable EC2 instances**.
- Discovered issue that periodically locked up our **Hadoop Cluster**.
- **Recovered corrupted MySQL installation** necessary for production.

April 2012 to July 2012 – **Mango Languages Inc.**
Contractual Project Manager

Mango Languages specializes in language learning software for consumers and libraries. Mango Languages contacted me to create a **Google Hangout** application called Mango Skits; a multiplayer game to be presented at **Google IO**.

- Deployed from initial concept to production **1 month before deadline**.
- Built on **Heroku** and **Twitter Bootstrap** using **Ruby on Rails 3.2**.
- Collaborated with **Google** to harness their immature API.

June 2011 to October 2011 – **SpeedySeat Inc.**
Contractual Web Developer

SpeedySeat recruited me to develop a front house restaurant reservation and seating software. Using Amazon's **cloud computing platform**, SpeedySeat was developed for rapid deployment, load balanced reliability and efficient use of resources.

- Deployed to **EC2** via **Chef** with an **S3** storage system for a **shared-nothing-architecture**.
- Designed using **Jade/Compass/SCSS + jQueryMobile**.
- Created layouts that automatically adjust for mobile optimization via **CSS Media Queries**.
